Physical Geology EXAM X – Fall or Spring 201X
QUESTIONS #1-26 Four Points Each (Maximum grade = 100 without flash cards)
(Flashcards = +3 or +4 for grades 68 or higher)

Example UNIT 1. Review Questions concerning scientific and geologic concepts that you should understand
1. We live in a metric world, with the US being the only large country that has basically shunned the metric system. Your neighbor told you that he lived 180 kilometers from you. What is the distance of 180 kilometers in miles?
   A. 10.8 miles
   B. 1080 miles
   C. 60 miles
   D. 108 miles
   E. 6 miles

Example UNIT 2: Review Questions you should be able to answer concerning the Gulf of Mexico lecture
2. Texas is the only state that owns a significant portion of the GOM seafloor and its minerals. This is important to all of the citizens of Texas and you should be aware of how our state uses this money. How does Texas use its offshore oil and gas royalty derived from these state-owned seafloors?
   A. The money goes into the Permanent School Fund
   B. The money goes into the Permanent University Fund
   C. The money goes into the General Fund, thus Texas has no income tax
   D. The money goes into the Texas Revenue Fund
   E. The money go to the Del Mar Fund

Example UNIT 4: Questions you should be able to answer concerning the Oceans & Shorelines system
3. The above sketch is a graphic that we can use to explain the causes of tides within our oceans and bays. We can be directly impacted in Corpus Christi by tides every day. Which type of tide is associated with the above sketch?
   A. Neap or Ebb tide
   B. Quarter tide
   C. Spring or Flood tide
   D. Proxigean tide
   E. Sun tide
